3843 P

Reg. No. : ....

Name : ....

VII Semester B.Tech. Examination, July 2009
S7 : Applied Electro and Instrumentation
BIOMEDICAL AND SIGNAL PROCESSING LAB (A)

Time : 3 Hours

Marks : 100

1. Write a Matlab program for simulation of a Digital I.I.R. Butterworth lpf using bilinear transformation for following specification in analog domain.

   Passband frequency, fp = 2 Khz

   Attenuation at fp = 3 dB

   Stopband frequency, fs = 5 Khz

   Attenuation at fs = 65 dB

   Sampling frequency = 48 Khz

   Find the transfer function H(s), H(z) and plot the Magnitude and Phase response of the filter.

2. Write a Matlab program for simulation of a Digital F.I.R. for following specification in analog domain.

   Cut-off frequency, fp = 2 Khz

   Passband ripple = 0.02

   Stopband frequency, fs = 4 Khz

   Stopband ripple = 0.02

   Sampling frequency = 240 Khz

   Window = Kieser Window

   Find the order of the filter and plot the Magnitude and Phase response of the filter.

3. Using DSP board write a program for generating 2 KHz Sine wave.

4. Using DSP board write a program for implementing a FIR low pass filter for Cut-off frequency 1 Khz. Sampling frequency 16 Khz.

P.T.O.

5. Using DSP board write a program for implementing a IIR second order Butterworth low pass filter for Cut-off frequency 2 Khz. Sampling frequency 16 Khz.

6. Write a Matlab program for simulation of a Digital I.I.R Butterworth hpf using bilinear transformation for following specification in analog domain.

   Passband frequency, fp = 5 Khz

   Attenuation at fp = 2 dB

   Stopband frequency, fs = 2 Khz

   Attenuation at fs = 60 dB

   Sampling frequency = 48 Khz

   Find the transfer function H(s), H(z) and plot the Magnitude and Phase response of the filter.

7. Write a Matlab program for simulation of a Digital I.I.R. Chebyshev lpf using bilinear transformation for following specification in analog domain.

   Passband frequency, fp = 1 Khz

   Attenuation at fp = 2 dB

   Stopband frequency, fs = 5 Khz

   Attenuation at fs = 60 dB

   Sampling frequency = 48 Khz

   Pass band ripple in dB = 0.5

   Find the transfer function H(s), H(z) and plot the Magnitude and Phase response of the filter.

8. Using DSP board write a program for implementing a FIR high pass filter for Cut-off frequency 2 Khz. Sampling frequency 16 Khz.

9. Using DSP board write a program for implementing a IIR second order Chebyshev high pass filter for Cut-off frequency 1 Khz. Sampling frequency 16 Khz.

10. Write a Matlab program for simulation of a Digital FIR band pass filter of length 41 for meeting following specification in analog domain.

    Order of the filter N = 41

    Sampling frequency = 48 Khz

    Lower cut-off frequency = 1 Khz

    Upper cut-off frequency = 2 Khz

    Use rectangular window.

    Plot impulse response h(n) and magnitude and phase response of the filter.

11. Write a Matlab program for simulation of a Digital FIR band stop filter of length 41 for meeting following specification in analog domain.

    Order of the filter N = 41

    Sampling frequency = 48 Khz

    Lower cut-off frequency = 1 Khz

    Upper cut-off frequency = 2 Khz

    Use rectangular window.

    Plot impulse response h(n) and magnitude and phase response of the filter.

12. Setup a Bio Potential Amplifier.

13. Setup a circuit for respiratory rate measurement.

14. Setup and plot ECG waveforms.

15. Using Cardimate, measure ECG parameters.
