Seventh Semester Examination - 2008

COMMUNICATION ENGINEERING

Full Marks - 70

Time: 3 Hours

Answer Question No. 1 which is compulsory and any five from the rest.

The figures in the right-hand margin indicate marks.

. Answer the following questions: 2×10

a) Give the Fourier transform of e^{-t} , $t \ge 0$.

(b) A signal exhibits an amplitude swing of ±3.5 V. It is quantized into 7 levels. Find the step size and hence the quantization error.

P.T.O.

- (c) What are the objectives of a clock in a digital system?
- (d) What is the 'Code' aspect of PCM?
- (e) What is the impulse response of an ideal low pass filter ? Sketch it.
- (f) Give a block schematic of generating a SSB signal from a DSBSC signal.
- (g) Write two advantages of a FSK signal.
- (h) What is the practical value of the noise figure of a two-port network? Why?
- (i) Give two typical bands used in satelite communication. Why the uplink and down link frequences are different?
- (j) How diversity is useful in a Cellular Communication System?

CPEC 5308 2 Contd.

- Derive the PSD of a NRZ data stream. Sketch it and state its salient features.
- 3. Derive the Fourier transform of a triangular wave of amplitude A volt and duration T sec from a similar rectangular pulse by using certain properties of Fourier transfrom. Sketch the spectrum. Why does it look so?

 10

Derive the output signal power in a PCM transmission system. Hence find out the signal to quantization noise ratio.

8+2

- 5. (a) How the equivalent noise temperature of a system in cascade is calculated? What is its practical implication?
 - (b) Discuss the radiation pattern of a dipole antenna. Explain how does a dipole act as an antenna?

CPEC 5308

3

P.T.O.

- (a) Compare a LED and a LASER as optical sources.
 - (b) Discuss the principle and operation of any photodetector.
- (a) Write down the salient features of a satellite communication system. Explain the working of a typical transponder.
 - (b) What is fading? What is its cause? Write two remedies for it.
- 8. (a) Draw and explain any AM demodulator. 5
 - (b) Discuss any two types of antennas as usedin a satellite communication system.
