

Total number of printed pages – 7

MCA
PCS 3002

Third Semester Examination – 2008

OPERATING SYSTEM

Full Marks – 70

Time : 3 Hours

Answer Question No. 1 which is compulsory
and any **five** from the rest.

The figures in the right-hand margin
indicate marks.

1. Answer the following questions : 2×10

- ✓(a) What is a Semaphore ? What are its uses ?
- ✓(b) What is a thread ? Why is it used ?
- ✓(c) Write four conditions of dead lock occurrence.

P.T.O.

(d) Differentiate between a page and a segment.

(e) Differentiate between internal and external fragmentation.

(f) Differentiate between a logical file system and a physical file system.

(g) What is the function of following UNIX commands:

vi, cat, ps, pwd.

(h) Differentiate between a process and a program.

(i) Differentiate between time-sharing and batch processing operating system.

(j) Write down the functions of operating system.

2 Consider the following set of processes, with the length of the CPU burst time given in milliseconds:

Process	Burst Time	Priority
P ₁	10	3
P ₂	1	1
P ₃	2	3
P ₄	1	4
P ₅	5	2

Assume all processes have arrived at time, t = 0, in order, P₁, P₂, P₃, P₄, P₅.

(i) Draw four Gantt charts illustrating the execution of these processes using FCFS, SJF, a non preemptive priority (a smaller priority number implies a higher priority), and RR (quantum = 1) scheduling.

(ii) What is the turnaround time of each process for each of the scheduling algorithms in part a?

(iii) What is the waiting time of each process for each of the scheduling algorithms in part a ?

(iv) Which of the schedules in part a results in the minimal average waiting time over all processes ?

3. Consider the following snapshot of a system :

	<u>Allocation</u>				<u>Max</u>				<u>Available</u>			
	A	B	C	D	A	B	C	D	A	B	C	D
P ₀	0	0	1	2	0	0	1	2	1	5	2	0
P ₁	1	0	0	0	1	7	5	0				
P ₂	1	3	5	4	2	3	5	6				
P ₃	0	6	3	2	0	6	5	2				
P ₄	0	0	1	4	0	6	5	6				

Answer the following questions using the Banker's algorithm :

10

(i) What is the content of the matrix Need ?

PCS 3002

4

Contd.

(ii) Is the system in a safe state ? If so, what is the safe sequence ?

(iii) If a request from a process P_i arrives for (0, 4, 2, 0) can the request be granted immediately ?

4. (a) Explain the uses of any ten different commands of UNIX. 5

(b) What is access control verification ? Explain with example. 5

5. Describe paged-segmented memory management technique in details. 10

6. Consider the following page reference string :

1,2,3,4,2,1,5,6,2,1,2,3,7,6,3,2,1,2,3,6

How many page faults would occur for the following replacement algorithms, assuming one and two frames ? Remember all frames are

PCS 3002

5

P.T.O.

initially empty, so your first unique pages will all cost one fault each. 10

- (i) LRU replacement
- (ii) FIFO replacement
- (iii) Optimal replacement.

7. (a) Compare and contrast between static and dynamic partitioned memory management technique. 5
- (b) Discuss various types of operating systems. 5

8. Suppose that the head of a moving-head disk with 200 tracks, numbered 0 to 199, is currently serving a request at track 143 and has just finished a request at track 125. The queue of requests is kept in the FIFO order :

86,147,91,177,94,150,102,175,130

What is the total number of head movements needed to satisfy these requests for the following disk-scheduling algorithms? 10

- (a) FCFS scheduling
- (b) SSTF scheduling
- (c) SCAN scheduling
- (d) LOOK scheduling
- (e) C-SCAN scheduling.
