Name : $\qquad$

# First Semester M.Tech. Degree Examination, June 2009 <br> Branch : Civil (2008 Scheme) <br> Environmental Engineering and Transportation Engg. <br> (Common) 

CMA 1002 : APPLIED STATISTICS
Time: 3 Hours
Max. Marks: 100
Instructions : Answer any five questions. All questions carry equal marks.
I. a) Derive the mean and variance of a Poisson distribution.
b) If the probability of a new born child is male in a typical family is 0.6 . Find the probability that in a family of 5 children there are i) exactly 3 boys. ii) majority of girls.
c) Fit a Poisson distribution for the following data.

| $\mathbf{x ~ : ~}$ | 0 | 1 | 2 | 3 | 4 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{f ~ : ~}$ | 122 | 60 | 15 | 2 | 1 |

II. a) In a certain examination, the percentage of candidates passing and getting distinctions were 45 and 9 respectively. Evaluate the average marks obtained by the candidate, the minimum marks being 40 and 75 respectively (Assume the distribution to be normal)
b) Is the function $\mathrm{f}(\mathrm{x})=\left\{\begin{array}{cl}\frac{1}{18}(3+2 \mathrm{x}), & 2 \leq \mathrm{x} \leq 4 \\ 0, & \text { other wise }\end{array}\right.$. Find $P(2 \leq X \leq 3)$.
c) Define simple random sampling, stratified sampling, systematic sampling.
III. a) The mean operating life of a random sample of 15 bulbs taken from a population with SD 500 hrs is 8900 hours. Find i) $95 \%$ confidence limits ii) $90 \%$ confidence limits for the population mean.
b) Ten students are selected at random from a school and their heights are found to be in inches $50,52,52,53,55,56,57,58,58$ and 59 . In the light of these data discuss the suggestion that the mean height of students of the school is 54 inches. Use 5\% level of significance.
c) A coin is tossed 10,000 times and head turns up 5195 times. Is the coin unibiased?
IV. a) The theory predicts the proportion of beans, in the four groups A, B, C and D should be $9: 3: 3: 1$. In an experiment with 1600 beans the numbers in the four groups were $882,313,287$ and 118. Does the experimental result support the theory ? (Given $\chi_{0.5}^{2}$ for 3 d.f $=7.81$ ).
b) Calculate the coefficient of correlation from the following data :

| $\mathbf{x}:$ | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{y}:$ | 9 | 8 | 10 | 12 | 11 | 13 | 14 | 16 | 15 |

c) If $\theta$ is the angle between two regression lines, show that $\tan \theta=\frac{1-r^{2}}{r} \cdot \frac{\sigma_{x} \sigma_{y}}{\sigma_{x}^{2} \sigma_{y}^{2}}$.
V. Three different machines are used for a production on the basis of the outputs, set up one-way ANOVA table and test whether the machines are equally effective.

| Machine I | Machine II | Machine III |
| :---: | :---: | :---: |
| 10 | 9 | 20 |
| 15 | 7 | 16 |
| 11 | 6 | 10 |
| 10 | 6 | 14 |

Given that the value of F at $5 \%$ level of significance for $(2,9)$ d.f is 4.26 .
VI. a) Given $f(x, y)=x e^{-x(y+1)}, x \geq 0, y \geq 0$ find the regression curve of $Y$ on $X$.
b) Perform a two way ANOVA on the data given below.

| Plots of land | Treatments |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | A | B | C | D |
| I | 38 | 40 | 41 | 39 |
| II | 45 | 42 | 49 | 36 |
| III | 40 | 38 | 42 | 42 |
